

## Environmental Policy

### Our Commitment

Quantum Safety places significant value on the environment and is committed to:

- Respecting the environment where we live and work.
- Minimising any adverse effects and enhance positive outcomes of our works to the environment.
- Reviewing the environmental aspects of Quantum Safety's operations and establishing objectives, targets and programs for all aspects that have the potential to significantly impact the environment. Objectives and targets will be reviewed annually, or as new significant aspects of our operations are identified.
- Ensuring this policy and the accompanying Integrated Management System Manual will be understood, implemented and maintained by all staff, and are compliant with Government legislation and the requirements of ISO 14001 Environment Management System.

### Scope

This policy applies to all workers, contractors, visitors, work experience students, trainees & clients.

### Compliance with State Legislation and Regulations

Quantum Safety demonstrates its commitment to comply with relevant legal obligations, standards, codes of practice, customer requirements, and any obligations that Quantum Safety has adopted voluntarily.

### Our approach

Quantum Safety will ensure that it addresses its commitment to environmental sustainability through the development, implementation and continual improvement of the Integrated Management System.

### Environmental Policy in practice

- Respect the environment & continually improve the Integrated Management System
- Act early to identify and manage potential risk to the environment.
- Understand and comply with our environmental obligation and sustainably use natural resources.
- Report and investigate all environmental incidents for organisational learning and prevent reoccurrence.
- Obtain and maintain third-party certification of the Environmental Management System ISO 14001.
- Promote a culture of shared responsibility to improve the environment.
- Monitoring of environmental performance and compliance with our Integrated Management System will be conducted, analysed and reported with the intention of continually improving the effectiveness and environmental performance of our operations and Integrated Management System.
- Ensuring that all waste is disposed of in the most appropriate and environmentally sensitive way, including reuse and recycling where available.
- Training and information shall be provided to employees so that they are aware of the environmental aspects relevant to their area of work.
